        TypingandQueryingXMLDocuments: SomeComplexityBounds Luc SegoufinINRIA, France
        ABSTRACT We study the complexity bound of validating XML documents, viewed as
        labeled unranked ordered trees, against various typing systems like DTDs, XML
        schemas, tree automata We also consider query evaluation complexities for various
        fragments of XPath. While the membership of a tree into a language definedby a tree
        automata over a ranked alphabet was already studied in [27], the extension to
        unranked trees is ...

        These applications include: automated translation of Ada data types and objects in a
        specification to an XML schema; and conversely, automated translation of the data
        types and elements in an XML Schema to an Ada specification. This requires creating
        applications in Ada that use and support XML; and using XML to create Ada
        environments including XML based tools. Ada and XML XML, Schema, & XSL Roles XML
        files contain the data.

        Following several Eurographics education workshops held in different European cities,
        the Computer Graphics and Visualization Education '99, under the motto Charting the
        Future for Computer Graphics Education, will be held in Coimbra, Portugal, from 3 th to
        5 th July. Computer graphics and visualization education specialists will meet to share
        their experiences and their visions and to make projections and recommendations for
        the next ten years of computer graphics education. edu Abstract ...

        3.1 Lock Modes In standard two phase locking protocols for synchronizing read and
        write operations, we have two kinds of locks: shared locks (S) and exclusive (X) locks.
        Mx locks are implicitly incompatiblepercentwithS and X locks, because another
        transaction that has acquired a content lock on a node must have navigated to this
        node in someObway,thereby setting at least one Tx lock. IDS locks are compatible with
        other IDS locks, while IDX locks are incompatible with all other ID locks.

　　　　　5M. J. Carey and J. Han RESEARCH ARTICLES AND SURVEYS Peer- to- Peer
　　　　　Management of XML Data: Issues and Research Challenges .... More details about
　　　　　distributed data mining could be found in [47]. Recently, the data generation rates in
　　　　　some data sources become faster than ever before. 3- Mining Techniques Mining data
　　　　　streams has attracted the attention of data mining community for the last three years.

7　Tutorials -- Full Descriptions of All Tutorials
　　　　　Size: 350.45KB　MIME type: text/html

　　　　　This tutorial defines and teaches the basic object-oriented concepts, illustrates their
　　　　　advantages, and introduces the components and features of object-oriented
　　　　　programming languages and development environments. Designing object-oriented
　　　　　software is hard, and designing reusable object-oriented software is even harder.
　　　　　Attendee Background: Attendees should understand basic object-oriented concepts, like
　　　　　polymorphism and type versus interface inheritance, and should have had some
　　　　　experience ...

11 Object-Oriented Programming, Systems, Languages & Applications
Size: 217.06KB   MIME type: text/html;charset=ISO-8859-1

The Design Snippets Tool statically analyzes Java code to generate partial design representations ("design snippets"). The demonstration shows the integration of software product line modeling based on feature models into the popular integrated development environment Eclipse. We will demonstrate that a flexible product line architecture can be build by using the modeling capabilities provided by pure::variants, an eclipse plugin for software product line development.

17 ACM Ubiquity - OakUT - C++ Unit Test Framework
Size: 43.67KB   MIME type: text/html

To write a test for this function, we need to perform two steps: Write a new test class, inherit it from oak::test::Test class and override its run() member function. Note that the first argument to the oak::test::Test base class is the test name. Notice, that the test name below passed to the base class constructor (oak::test::Test) matches the test name in the xml properties file above.
